Cleaning and Disinfecting Patient Rooms
Be Safe! Be Thorough!

Clean and disinfect frequently touched surfaces to break the COVID-19 chain of transmission.

Although we are still learning about COVID-19, we know that the virus can survive and be transmitted on surfaces and equipment for hours, and even for days. Regular systematic cleaning and disinfection is critical to containing the spread of SARS-CoV-2.

- Clean and disinfect high-touch surfaces, including walls, floors, and contact surfaces daily and as needed.
- Clean spills and soiling immediately and disinfect the affected area.
- Use appropriate cleaning products (see EPA list N at https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2-covid-19) and follow the directions.
